

Stainless-steel • Can't be eaten • Can't be beaten

## Testimonial from Robert Gallo

President of Round the Clock Pest Control ([www.rtcpestcontrol.com](http://www.rtcpestcontrol.com))

**“We are definitely going to use it again.”**

Round the Clock Pest Control is a family owned and California based full service pest management firm. Our specialty is proactive bed bug and pest control programs for the hotel, universities, and apartment management industry. We provide integrated pest management with a strong focus on prophylactic proofing and exclusion.

The RodeXit products were strongly recommended to us by a friend from another pest management firm. We therefore decided to use RodeXit rodent proofing seals for a major proofing project involving 220 doors in 11 apartment buildings.

The buildings were experiencing heavy rat activity in the basement level. Most of the activity was found in the trash rooms and rooms where the trash bins were stored. The rodents traveled freely through the basement level as the doors weren't properly sealed. As a result of the installation of the RodeXit seals we were able to contain the activity to the trash rooms and thereby to grab a hold of the rodent population. Because the rats were not able to move freely in the basement any longer, we could with the use of trapping, rodenticides, tracking powder, and a ratting dog eliminate the rat population. I am glad that we followed my friend's recommendation of the RodeXit seals. It is an excellent product and we are definitely going to use it again.

The pictures show one of the proofed doors and President Robert Gallo with 100+ dead rats.
