

Stainless-steel • Can't be eaten • Can't be beaten

**Testimonial from Sergey Nemykin
owner of Industrial Pest Elimination (www.pestfreeipe.com)**

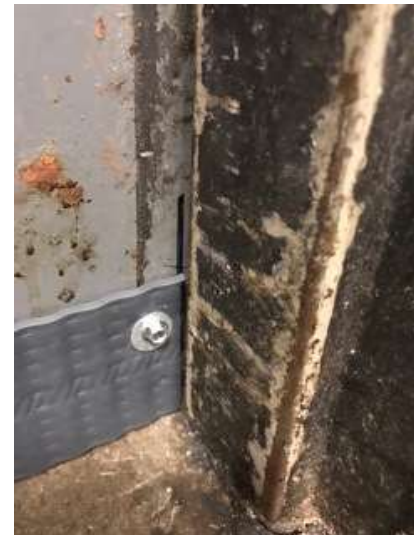

“It took no time at all . . . “

The specialty of my firm, Industrial Pest Elimination, is the pest proofing of food preparation facilities such as restaurants and commercial kitchens.

It is therefore essential that I can provide my customers with the best possible protection against mice and rats. The RodeXit seals helps me doing that in an efficient and labor-saving way.

These pictures show how perfectly tight I have been able to proof an old steel door with a RodeXit rodent proofing seal:

The rodent proofing seal is provided with very practical screw hole markings so it is a walk in the park to place the screws right and do a perfect looking job – as it can be seen from the pictures.

It took no time at all to install it, this is what I like about the RodeXit door sweep. I've spent 5 minutes on installation, it took more time to get the tools!! Speaking about tools: pair of diagonal cutters, marker and electric screwdriver, not much at all!!!
